LEARNING DIARY,
NodeJS

26.12.2023(NodeJS)

After checking all the set-up I have started with the NodeJS module. As I aspire to become a back-end engineer it felt like a good start for me. In order to perform I/O intensive work, NodeJS is the perfect runtime to choose as it also supports multi-thread operation through event emitter. After watching the tutorial now I can comprehend how core modules like fs, path, eventemitter, url and http work. Furthermore, I also have learnt about creating a server and loading files(html, json) to it and deploying it to a cloud server(heroku). Apart from loading files, the tutorial also provided content about dealing with error and error code.
